

IN THE CLAIMS

Sub
BT
C
1. (Amended) A control apparatus having a plurality of command means, and controlling [an] equipment according to [each of] actions made by said plurality of command means, [the] said control apparatus [characterized by] comprising:

A
[a] means for judging similarity and/or non-similarity of each [of actions] action made by said plurality of command means; and

[a] means for determining a response time [of said control in response to] for each of the actions made by said plurality of command means,

wherein when said plurality of command means are activated alternately, [if] and when said similarity is judged, said response time is [increased or decreased] modified.

--2. (Amended) [A] The control apparatus according to claim 1,

Sub BT
wherein [the] control is [such a control] provided by the control apparatus for a second image when the second image is displayed together with a first image on a display screen, such that

[when] a displayed position of said second image is

sub B1
controlled according to each of the actions made by said plurality of command means.

--3. (Amended) [In a] Video equipment [capable of] for use with a plurality of command means for displaying a second image together with a first image on a display screen,

[the] said video equipment [characterized by] comprising:

[a] means for controlling a displayed position of said second image arbitrarily,

A1 wherein said second image is displayed at an arbitrary position on said display screen according to an action made by an arbitrary one of said plurality of command means.

--4. (Amended) [A] The video equipment according to claim 3,

wherein each said command means consists of a plurality of command means,

wherein there are provided,] comprises:

[a] means for judging similarity and/or non-similarity of [actions] each action made by said plurality of command means, and

[a] means for determining a response [of said control in response to] time for each of the actions made by said plurality of command means, such that

when a displayed position of said second image is

controlled according to an action made by each of the command means, and

when said plurality of ^B command means is activated alternately, [if the] and when said similarity of [actions] each action is judged, said response time is [increased or decreased] modified.

^{Amo B2} --5. (Amended) [A] The video equipment according to claim 3,

^{A1} wherein the [display] displayed position of said second image may be set outside an effective area of said display screen.

--6. (Amended) [A] The video equipment according to [any of] claim 3 or 5, [wherein there is provided a] further comprising means for recording and holding information of the [set] displayed position of said second image.

^B --7. (Amended) [A] The control apparatus according to [any of] claim 2, 3, or 5 [or 6],

wherein the control of said equipment is [a control] controlled by of a cursor.

--8. (Amended) [A] The control apparatus according to [any of] claim 2, 3, or 5, [or 6,]

~~wherein the control of said equipment is [a control of]
controlled by a pointer.~~

Sub B3 C2
--9. (Amended) [In a] A control method [having] using
a plurality of command means[,] and controlling [an] equipment
according to each [of actions] action made by said plurality of
command means,

[the] said control method [characterized by] comprising the
steps of:

A1
[a step for] judging similarity and/or non-similarity of
each [of actions] action made by said plurality of command means;
and

[a step for] determining a response time [of said control in
response to] for each of the actions made by said plurality of
command means,

wherein when said plurality of command means are activated
alternately, [if] and when said similarity is judged, said
response time is [increased or decreased] modified.

B3
--10. (Amended) [A] The control method according to
claim 9,

wherein the control of said equipment is [such a] control
[for] of a second image [when] with the second image [is]
displayed together with a first image on a display screen of the
[video] equipment,

[when] and where a displayed position of said second image is controlled according to each [of the actions] action made by said plurality of command means.

~~-11. (Amended) [In a] A control method [of a Video] for video equipment [which is] capable of displaying a second image together with a first image on a display screen,~~

~~[the] said control method [of a video equipment characterized by] comprising the steps of:~~

~~[a step for] controlling a displayed position of said second image arbitrarily, and~~

~~[wherein] displaying said second image [is displayed] at an arbitrary position on said display screen according to an action made by an arbitrary command means.~~

~~--12. (Amended) [A] The control method of [a] video equipment according to claim 11,~~

~~wherein said arbitrary command means [consists of] includes a plurality of command means, and~~

~~[there are comprised of,] said control method further comprises the steps of:~~

~~[a step for] judging similarity and/or non-similarity of each [of actions] action made by said plurality of command means, and~~

~~[a step for] determining a response [of said control in~~

response to] time for each of the actions made by said plurality of command means, such that

when a displayed position of said second image is controlled according to an action made by each of the command means, and

when said plurality of command means is activated alternately, [if the] and when said similarity of [actions] each action is judged, said response time is [increased or decreased] modified.

AI
Sub B4
--13. (Amended) [A] The control method of [a] video equipment according to claim 11, [wherein] including setting the displayed position of said second image [may be set] outside an effective area of said display screen.

--14. (Amended) [A] The control method of [a] video equipment according to any of claim 11 or 13, [wherein there is comprised of a step for] further comprising the steps of:
recording and holding information of the [set] displayed position of said second image.

B
--15. (Amended) [A] The control method according to [any of] claim 10, 11, or 13 [or 14],
wherein [the] control of said video equipment [is a control of] includes controlling using a cursor.
